Education

Simon Fraser University

Bachelor of Science in Computer Science

Burnaby, BC

Jan 2021 – Dec 2025

Skills

Languages Python, JavaScript, C++, Bash, SQL

AI & APIs Anthropic (Claude), HuggingFace, LangChain, REST APIs, Postman

Dev Tools Jenkins, Git, Linux, Jupyter, VS Code

SaaS & IdP Okta, Jamf Pro, Microsoft Intune, Active Directory, Google Workspace

Work Experience

Junior IT Operations Administrator

Hootsuite

Jan 2025 – Present

Vancouver, BC

- Automated offboarding workflows with Python + Jenkins pipelines, eliminating 90% of manual IT operations tasks and reducing execution time from hours to minutes.
- Engineered identity governance automation via Okta APIs to dynamically assign Slack channels and app access based on group membership and org roles.
- Led technical execution of a 900-device MacBook refresh, managing asset tracking, secure wipe, and compliance documentation end-to-end.
- Implemented data validation and error-handling across Okta, Google Workspace, and internal systems to ensure accurate deprovisioning at scale.
- Onboarded and supervised 2 co-op students, providing technical mentorship and guiding them through IT operations workflows and tooling.

Full Stack Developer

Reign Foundation (NGO)

Apr 2025 – Present

Remote

- Building a French language learning platform alongside a PhD mentor, owning full-stack development from architecture to deployment.
- Integrated OpenWebUI speech-to-text and text-to-speech with GPT-4o mini to deliver real-time conversational feedback on user responses and pronunciation exercises.
- Conducted user interviews to define product requirements and iteratively shape features around learner needs.

Tech Specialist

London Drugs

Feb 2024 – Feb 2026

Surrey, BC

- Diagnosed hardware and software issues across macOS and iOS devices in a high-volume retail environment, maintaining high customer satisfaction.

Projects

DocSync AI — Hootsuite Internal Hackathon Winner

Python · Anthropic (Claude) · Slack SDK · Jira REST API · Confluence REST API · Jenkins

Jan 2025 – Present

- Won internal Hootsuite hackathon; adopted company-wide as the standard tool for IT documentation maintenance, cleanup, and expansion.
- Built an end-to-end LLM pipeline that correlates closed Jira tickets with Confluence IT pages to detect stale documentation and surface it to reviewers.
- Designed a 3-stage cost-aware scoring system: local keyword prefilter → Claude semantic shortlist on titles → deep Claude scoring on full page content.
- Automated the Slack feedback loop — cards post with invisible metadata; a Jenkins-scheduled poller reads reactions and thread replies to drive Confluence edits, archiving, and gap-page creation autonomously.

Jira Ticket Nudger

Python · Slack SDK · Jira REST API · Jenkins

2025 – Present

- Built a scheduled Slack bot that automatically messages team members every Thursday with a summary of their open Jira tickets, reducing ticket staleness and improving team accountability.
